A smart choice, for the wellbeing of your entire family

We love to surprise you! Since our first version of Focus massage chair was so popular, we decided to revolutionise it to ensure you continue to have dreamy experiences. This is how Focus II was born, a product from the latest generation of Komoder 2021 smart massage chairs.

The massage chair is designed to offer the maximum level of comfort while contributing to the wellbeing of your entire family. It comes with 12 massage programs and it is ready to leave anyone speechless with its performance.

In less than 20 minutes Focus II manages to take you to another world, creating a dreamy atmosphere and ensuring a continuous zen state of mind.

Its built-in sensors provide real-time data to ensure a personalised massage session for each user. Equipped with 28 air cushions, the massage chair is able to release tension and relax even the most tense muscles with the help of the massage rollers and air pressure massage. In addition, the extensible leg support and the premium space-saving design make our Focus II massage chair an ideal choice for you.

- › Equipped with a 135 cm "SL" rail
- › Offers a full body pressure massage using the 28 air cushions
- › Extendable calfs support, adjustable to the user's height!
- › Reflexology massage function
- › Smart scanning function to ensure a personalized massage for each user
- › Carbon fiber-based infrared heating function
- › 'Zero Gravity' function to ensure maximum relaxation
- › Perfect to soothe lumbar and cervical pain
- › Voice commands, joystick and remote to ensure the user has full control over the massage sessions
- › Bluetooth audio system to ensure the most relaxing massage sessions

A completely customisable treat

The smart massage hands constantly take data from the built-in sensors and move on the 135 centimeter rail, which follows the natural curvature of the body and guarantees an even massage.

The massage chair thus offers you a multidimensional massage, by pressing, kneading, rhythmic beats and combinations of these modes, adapting to the height and weight of each user.

The advanced technologies included in the Focus II massage chair allow you to adapt the experience to everyone's needs: you can select the distance between the rollers, you can customize the speed of action and you can choose a deep massage for your sensitive areas. In addition, the rolling massage function helps to correct the posture of the body, improving the quality of life. You will feel how your muscles are relaxed, your blood is set in motion and your body is energized!

Smart scanning for a perfect fit

Equipped with the intelligent scanning function, Focus II offers a personalized experience to each user. For an effective massage it is necessary to sit as comfortably as possible, so that the chair can accurately identify your height and weight.

The air cushions ensure a correct position in the massage chair, and the sensors incorporated in the 3D massage hands for the back and pelvis, help detect the weight and height of each user. In addition, the leg support is extensible by up to 15 centimeters, which allows you to adopt a correct posture and fully enjoy the massage, regardless of height!

Lie on a cloud of air cushions

What could be more comfortable than an air cushion? The answer is a whole system of air cushions, designed to increase both comfort, as well as the efficiency of the massage. The pillows perform a pressure massage of the whole body, with adjustable intensity according to everyone's preferences, and are tailored to follow the natural curves of the body, including the limb area.

The pillow for the head can be adjusted freely, up or down, while the cervical pillows are equipped with an automatic system for detecting and locating the shoulders, to ensure a correct posture and increase the efficiency of the massage.

Stretching the arms, back and legs with pillows dedicated to these areas of the body is recommended to activate bone regeneration, eliminate muscle tension and contractions.

Focus II will warm your soul

You will love the Focus II experience: for maximum efficiency in treating neck and lumbar pain, the massage chair is additionally equipped with a fast back heating function, which uses carbon fiber as an infrared heating source. Infrared radiation has the perfect wavelength to be absorbed by human cells, which allows energy absorption and metabolism stimulation.

Of course, the system removes that persistent “cold from the bones” that can occur both in winter and due to prolonged exposure to air conditioners during the summer.

Reflexology: an impressive function!

An effective massage starts with a reflexology session, with triple rollers massaging your feet, which acts to stimulate the nerve centers. A special design with circular protuberances makes the professional “scraping” type of massage feel like the skilled hand of a masseur.

While the soles enjoy this luxurious treatment, the feet will rest on the leg support, which extends telescopically to fit the different heights of the users and allow you to stretch your feet in the most comfortable way.

We recommend the reflexology function for those who spend a lot of time standing up, as well as for those who want to forget about the leg pain accumulated during the day!

Focus is amplifying well-being

The audio system integrated in the Focus II massage chair is designed to enhance your well-being, by creating the perfect ambiance for relaxation. Simply connect the chair to your phone, tablet or laptop via Bluetooth. The high-fidelity speakers built into the backrest will allow you to listen to your favorite music, from your favorite apps or from your own collection.
